

WILLI GELLER
Creation
PRODUCT CATALOGUE

“I have no secret – my success is a result of all my experiences.”

Simply Brilliant – then as now

Inspired by the desire for a unique and vital copy of nature’s own creation, the internationally renowned dental technician Willi Geller created a metal and ceramics range in 1988 which made quite a splash: **perfect, almost natural restorations** became possible all at once – masterly in their physical properties and reliable and reproducible in terms of shading. With Creation, each tooth was suddenly able to retain its own character – in shade, form and function

The new ceramic materials from Switzerland quickly set the trend for dental technology worldwide. Geller’s **“master ceramics”** and his distinctive layering technique set benchmarks for a top-class dental aesthetic. Through the opportunity for ideal natural replicas, and through the seemingly **inexhaustible variety** of the metal and ceramics range, the dental technician gained an entirely new profile – the profile of an artist.

Experience as a source of success

Founded as a “one-man company” more than 35 years ago, the dental company has continued to grow and develop steadily: new manufacturing technologies, additional fusions and effect materials, as well as **expanded indications and, more recently, a light-curing veneer composite with “Creation Brilliance”**. Today, Creation is one of the world’s most important manufacturers of ambitious ceramics systems, and resin and composite teeth with a strong profile. The innovative ceramic and composite materials and denture teeth are successfully processed in over 70 countries **across the globe**. And the users are not the only ones who are impressed; dentists and patients are also convinced by our “Simply Brilliant“ aesthetics concept.

Willi Geller’s dental creations represent the original – and are just as brilliant today.

CERAMIC

“Creation is the only eligible choice for a dental technician to create convincing, which means naturally appearing, restorations.”

Hubert Schenk

REM-picture,
etched, ceramic surface:

Leucite-reinforced metal ceramic CC

CREATION CC –
technically refined – inspired by nature

Creation CC is a high-fusing metal ceramic with unique optical and physical properties that has developed constantly in line with growing aesthetic demands – **recognized worldwide for more than 35 years!**

The perfectly coordinated ceramic materials have excellent homogeneity and thus guarantee high flexural strength. The result: a densely sintered structure for **pure and non-porous layering** with the utmost reliability.

The pure potash feldspar with micro-pure leucite crystal structure in Creation CC creates iridescent light refraction and natural brilliance and enhances the strength. Exceptional colour nuances can additionally be created with the unique effect materials.

The ceramic bonder Crea Alloy Bond also acts as a CTE buffer between metal and ceramic – for improved adhesive properties to non-precious metal and greater colour reliability.

With the modular classic brand Creation CC, metal-ceramic restorations can be produced with impressive aesthetics and dimensional stability – for **superb dental artistry!**

Creation CC – natural brilliance and efficiency.

THE BRILLIANCE OF CREATION CC:

- Unique, lifelike aesthetics thanks to highly pure potash feldspar
- Resilience due to consistently high flexural strength
- Natural colour effect and light dynamics due to leucite crystals
- Ease of handling thanks to consistent colour and layering system
- Processing reliability since 1988

CC Creapast Kit | 000300
Complete paste opaques with modifier

- 16 Opaque O-A1-D4 3g
- 5 Opaque Dentine Modifier . 3g
- 1 Creapast Brush
- 1 CC Manual

CC Bleach Shades Kit | 000250
Complete bleach shades colours

- 1 Bleach Creapast Opaque O-AB 3g
- 3 Bleach Dentine BD-A, B, BO 20g
- 1 Bleach Enamel S-AB . . . 20g
- 1 Bleach Shoulder SP-AB . 15g
- 1 Shoulder Liquid 25ml
- 1 Modelling Liquid ML-H . 25ml
- 1 Bleach Shade Guide
- 1 CC Color Chart/Firing Chart

CC Opaque Kit | 000800
Complete powder opaques with modifier

- 16 Opaque O-A1-D4 20g
- 8 Opaque Modifier OM-11-17, G 15g
- 1 Foundation Opaque FOP 20g
- 2 Opaque Liquid OL-H . . 50ml
- 1 Universal & Glaze Liquid 25ml
- 1 Shade Guide

Crea Alloy Bond | 000080

Crea Alloy Bond is a bonding agent which was specially developed for neutralising leaking metallic oxides. At the same time it acts as an efficient CTE buffer between porcelain and metal alloy.

- Safety owing to high flexural strength (70 MPa)
- No marginal discolorations – staining metallic oxides are neutralised
- Greater colour reliability because of the golden yellow undertone
- Compatible with all materials from Creation CC and LF

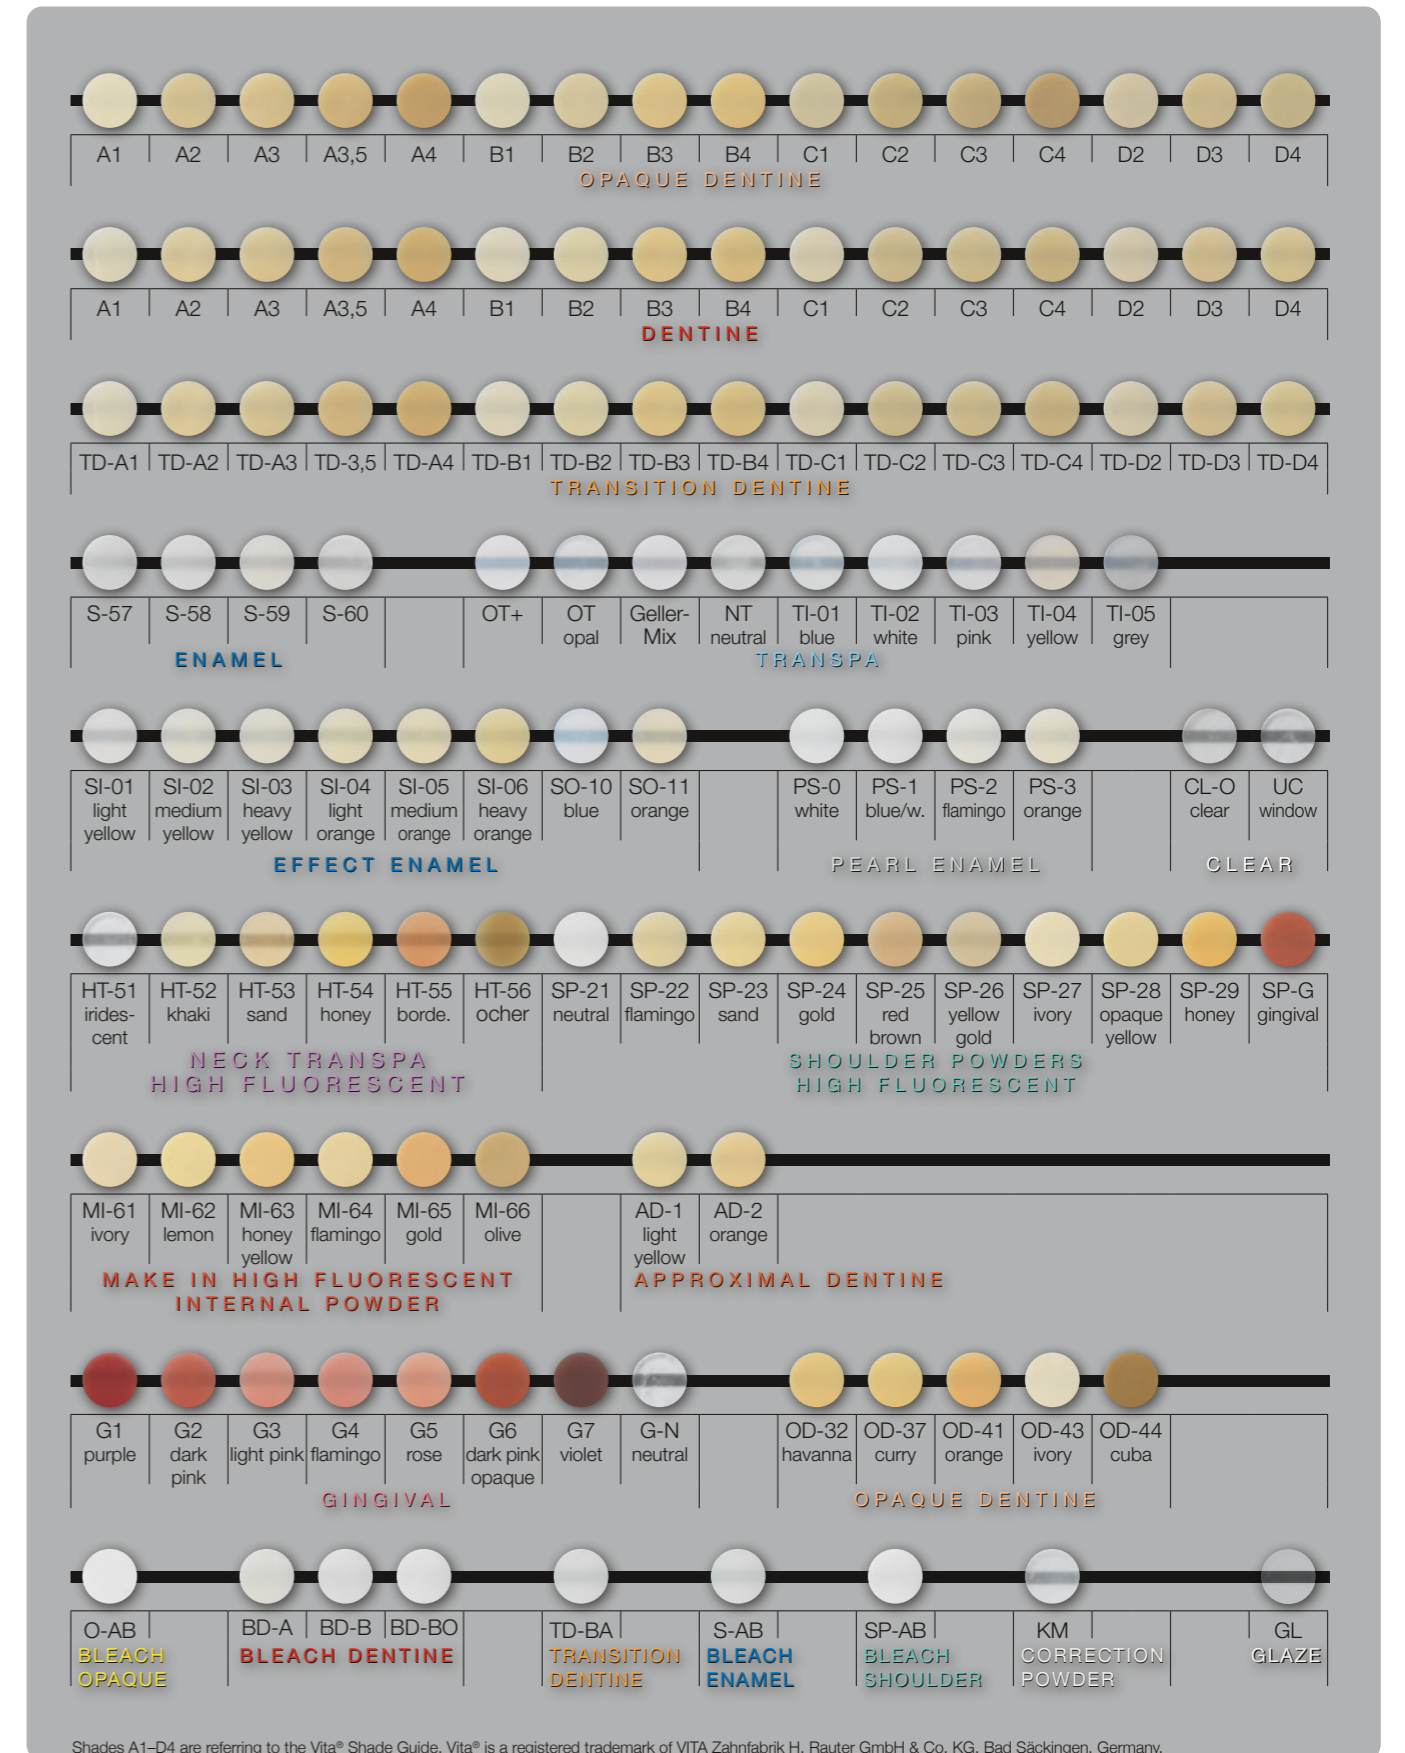

WOP Opaque

The coating of opaque can be carried out at only 950 °C instead of 980 °C with the WOP paste. This procedure is useful with certain high-gold alloys and galvanised frameworks. After the WOP coating the second coating of opaque is applied.

- Firing temperature 950 °C

- | |

Glass ceramic

Leucite-reinforced metal ceramic CC

Leucite-reinforced zirconium dioxide ceramics ZI-CT

CREATION ZI-CT – the fine art of ceramics

Creation ZI-CT is an innovative feldspar ceramic containing leucite crystals which is matched to the CTE of all high-strength zirconium dioxide frameworks and structures – whether white, coloured or translucent.

The high proportion of pure potash feldspars creates light scatter that is comparable to that of natural teeth and a **brilliant colour effect**, while the micro-fine leucite crystals improve mechanical strength and thereby ensure a **durable ceramic structure**.

Fascinatingly fluorescent: the special bonding agent Frame Shade NT guarantees strong adhesion to the zirconium dioxide framework and also increases its fluorescence – for **powerful bond strength** without tensile stresses.

The modular Creation ZI-CT allows restorative work on zirconium dioxide with impressive colour and dimensional stability and with **brilliant light reflection and dynamics**.

High-fusing, high aesthetics, high stability: Creation ZI-CT.

*“Unobtrusively beautiful – a true Creation!”
Andreas Nolte, MDT*

THE BRILLIANCE OF CREATION ZI-CT

- Natural colour effect and light dynamics due to leucite crystals
- Excellent bonding strength thanks to high firing temperature of 910 °C
- Extremely low shrinkage for fewer correction firings and more efficiency
- Reliability due to homogeneous crystalline structure and high resilience

CREATION ZI-F – naturally brilliant – brilliantly natural

Creation ZI-F is a tried and tested zirconium dioxide ceramic. It is perfectly suited to veneering any kind of zirconium dioxide framework.

At the same time, the modular materials are also an ideal choice as **add-on materials** for Creation ZI-CT because their firing temperature is about 100°C lower than the high-fusing zirconium dioxide veneering ceramic.

Creation ZI-F is an **extremely versatile** zirconium dioxide ceramic with high **natural light reflection**, combined with all the material-related advantages of zirconium dioxide.

With the unique effect materials, exceptional colour nuances can also be created rapidly and comfortably – for maximum impact with minimum effort.

Creation ZI-F – natural light dynamics!

LITHIUM DISILICATE

“With Creation LS, there is now finally a veneering ceramic for lithium disilicate, which offers me a wide scope for creating restorations with a natural effect. The colour concept matches that of the tried and tested Creation ceramics, with an outstanding light reflection, plenty of brightness and strong, dynamic colours. The combination of Creation LS Press and Creation LS provides me with many benefits in my daily work, and makes it easier for me to create restorations with a vivid effect.”

Sebastien Mosconi, Oral Design

CREATION LS/LS Press – Press, veneer and individualise with lithium disilicate!

Efficiency and natural aesthetics: Creation LS Press and Creation LS are a perfect ceramic symbiosis offering dental technicians reliability and stability but also brilliant colours and versatility on and with lithium disilicate, as standard is not enough for Creation!

Creation Willi Geller completes the product range with a new pressable and veneering ceramic allowing the dental technician outstanding aesthetics, whether used single or in combination. With the Creation LS Press blanks and the Creation LS veneering ceramic perfectly matched to the lithium disilicate frame highly aesthetic and stable all-ceramic restorations can be manufactured – efficiently pressed and then individually veneered resp. characterised with the proven CreaColor stains and modifiers.

Reliably combined for extended possibilities: the two system components Creation LS Press and Creation LS follow master ceramist Willi Geller's "Simply Brilliant" philosophy proven for more than 35 years. They allow the dental technician manufacturing naturally beautiful anterior and posterior restorations with resp. on lithium disilicate assuring system safety.

Creation LS / LS Press – the sophisticated combination

THE BRILLIANCE OF THE CREATION LS:

- Comprehensive colour assortment for individual veneering and characterisation
- Layer build-up according to the tried-and-tested colour coding concept of Creation Willi Geller
- Natural colour brilliance and light effects due to feldspar content
- Homogeneous crystal structure and outstanding surface density
- Maximum stability – even after several firings

THE BRILLIANCE OF THE CREATION LS PRESS:

- High strength due to homogeneous crystalline structure: > 500 MPa
- Minimal invasive preparation: 0.3 mm veneer, 0.8 mm anterior
- Creative freedom of manufacturing: full veneers, partial veneers
- The appropriate blank for every indication

Creation LS Press MO-Ingot (Medium Opacity)

MO press ingots are the first choice for full veneering. Due to their high opacity, they feature a high light reflection and are suitable for covering discoloured dies and titanium abutments.

Colours

- MO-0, MO-1, MO-2 5 x 3 g

Creation LS Press LT-Ingot (Low Translucency)

LT press ingots can be used for restorations to be fully or partially veneered with Creation LS. With thin layer thicknesses, Creation LT can also be used for monolithic restorations.

Colours

- LT-B00, LT-B0, LT-A1, LT-A2, LT-A3, LT-B1,
LT-A, LT-B, LT-C, LT-D 5x3g

Creation LS Press MT-Ingot (Medium Translucency)

MT press ingots are the first choice for fully-anatomic restorations which are characterised by individual staining. The MT ingot can also be used for full or partial veneering.

Colours

- MT-B00, MT-B0, MT-A1, MT-A2, MT-A3,
MT-B1, MT-B2, MT-D2 5x3g

Creation LS Press HT-Ingot (High Translucency)

HT press ingots are particularly suitable for minimal invasive restorations (e.g. inlays, onlays and veneers) where mainly the natural enamel is replaced. The shade individualisation is carried out in the staining technique.

Colours

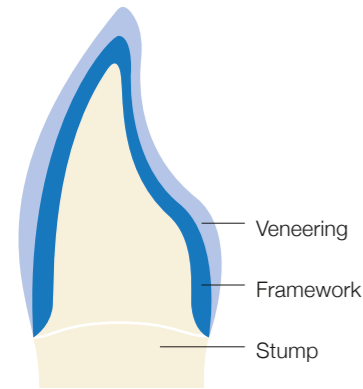

- HT-B00, HT-B0, HT-1, HT-2, HT-3, HT-4 5x3g

Opal Transpa OT+ and Geller-Mix – highest opalescence and transparency for more liveliness!

With the new Geller-Mix and the Opal Transpa OT+, Creation Willi Geller expands its ceramic range with two layering ceramics with opalescent properties. The opalescence caused by light scattering and reflection increases the light dynamics of dental restorations and makes dentures appear even more natural in the incisal area.

The Geller-Mix and OT+ expand the range of all layering ceramics.

Opal Transpa OT+ and Geller-Mix – expressive in the colour effect and brilliant in the result!

- **Opal Transpa OT+** is a layering ceramic for maximum opalescence raising the light dynamic effects of veneered restorations to a higher level. OT+ is almost colour neutral and intensifies the opalescent light effects of both light and dark tooth shades.
- The **Geller-Mix** has been mixed individually by professionals for many years and is now available as a finished product. The fired ceramic with its subtle opacity convinces with its harmonious balance between opalescence and brightness. This property creates vivid effects at light ridges and incisal edges especially with light tooth shades.

Opal Transpa OT+

The effect porcelain OT+ shows intense opal effects and is suitable for both light and dark tooth shades.

Scope of application:
mesial and distal light ridges and incisal edges.

CC/Transpa OT+	20g 000287

MAGIC COLOUR

„The Magic Colour range contains all the shades necessary for the white and red aesthetics. Thanks to the powder-liquid concept, the consistency of the stains can be adjusted very individually, depending on requirements, and the intensity of the shades can be controlled. The stains cover white and pre-stained frameworks effectively and serve as the basis for microlayer shading. Magic Colour offers great freedom in the fabrication of monolithic restorations and the results are foreseeable.“

Stefan Picha – Oral Design

CREATION Magic Colour – a colour system designed for the handcraft

Digital production of monolithic restorations is efficient and the results are robust. Magic Colour was also developed to meet users' aesthetic demands. The compact colour system connects innovative manufacturing processes with every individual dental technician's craftsmanship expertise.

Uncompromising aesthetics

Magic Colour is used for accentuating and surface staining of monolithic zirconia or lithium disilicate restorations. As a powder-liquid combination, the colour system opens up numerous processing options and is very easy to use: Mixed with Magic Colour Liquid GL, the finely ground colour powders are extremely efficient as paste compounds, even in thin layers, and the results are foreseeable.

More brilliance, more natural depth

Whether used for surface varnishing, for characterising colour effects, or in combination with microlayering: Magic Colour is the starting point for multifaceted aesthetics. Microlayering with Creation ZI-F (with zirconia) or with Creation LS (with lithium disilicate) enhances aesthetics, depth effect and brilliance – especially with monolithic anterior restorations. Magic Colour makes every restoration bear the signature of the respective dental technician.

THE BRILLIANCE OF MAGIC COLOUR:

- Manifold processing options thanks to the powder-liquid system
- Surface characterisation of CAD, press and layered ceramics, especially of monolithic zirconia and lithium disilicate restorations
- Tinting of layering ceramics
- For surface staining and for use in combination with Microlayering
- Natural, optical effect from the fluorescence of the fine-grained powders

Magic Colour Professional Kit | 001205
 The kit contains the full range of stains as well as glazes and liquids – for both white and red aesthetics.

- 4 Dentine Shade DS-A-D . . . 3g

CREACOLOR –
stains and modifiers for all ceramics

CreaColor is a complete **“two in one” colour system** which can be used to place individual colour nuances simply and efficiently **for all ceramic surfaces and materials** – whether by the internal or external staining technique.

The physical properties of the **high-quality stains and modifiers** are so perfectly matched to the ceramic surfaces and materials that they can be worked universally with all layering and pressed ceramics, pressed or fired dentine cores as well as zirconium dioxide frames – after all, **colour creativity should be unlimited!** Furthermore, the new stains are extremely fine-grained and fluorescent and they can readily be mixed with each other.

CreaColor is made up of two components:

- CreaColor Make up Neo
- CreaColor In Nova Neo

THE BRILLIANCE OF CREACOLOR:

- **Utmost colour brilliance for internal and external colouring**
- **Versatile and efficient: one system for all ceramics**
- **Natural colour effect due to very high fluorescence values**
- **Easy to handle: can be mixed with each other and can be corrected**

Fewer bottles – more simplicity and efficiency: For more clarity and space on the laboratory table, Creation liquids can be obtained in high fusion or low fusion versions.

Modelling Liquid – High & Low Fusing

Standard modelling liquid for mixing Creation ceramics except for shoulder ceramics (SP).

- ML-H (High) for high fusion ceramics Creation CC and ZI-CT
- ML-L (Low) for low fusion ceramic Creation ZI-F

Modelling Liquid High Fusing 25 ml | 000012
 Modelling Liquid High Fusing 50 ml | 000013
 Modelling Liquid High Fusing 250 ml | 000014
 Modelling Liquid High Fusing 1.000 ml | 000015

Modelling Liquid Low Fusing 25 ml | 000016
 Modelling Liquid Low Fusing 50 ml | 000017
 Modelling Liquid Low Fusing 250 ml | 000018

Opaque Liquid – High Fusing

Mixing liquid for the high fusion ceramic Creation CC.

Opaque Liquid High Fusing 25 ml | 000019
 Opaque Liquid High Fusing 50 ml | 000020
 Opaque Liquid High Fusing 250 ml | 000021

Shoulder Liquid

Universal modelling liquid for mixing all SP shoulder ceramics from Creation.

Shoulder Liquid 25 ml | 000025
 Shoulder Liquid 50 ml | 000026

Universal & Glaze Liquid

Additional universal liquid with a wide range of uses.

- Addition of a very small amount into the ceramic mixed with ML enhances the smoothness
- The pre-drying time must be extended during firing
- Mixing all Creation glazing materials and CreaColor colours In Nova Neo and Make up Neo
- Remoistening of Creapast

Universal & Glaze Liquid 25 ml | 000010
 Universal & Glaze Liquid 50 ml | 000011

Moisturing Fluid

For extensive restorations and complex corrections, as a moisturiser for the applied ceramics.

- No more drying out, the ceramics remain consistently modellable
- Efficient and simple: one fluid for all ceramics
- Longer working time for mixed materials – especially for sizeable work
- Targeted application due to controllable moisture content

Moisturing Fluid 25 ml | 000090

Magic Colour Liquid GL

Mixing fluid for stain and glaze powder especially developed for the stain technique.

Liquid GL 25 ml | 001241
 Liquid GL 50 ml | 001242

Magic Colour Special Liquid ML

Has been developed exclusively for micro layering with Creation ZI-F and Creation LS. It produces a homogeneous with dense ceramic consistency, which enables the application of material in very thin layers. Due to their low shrinkage and high density, the veneers exhibit a self-glaze effect after firing.

Special Liquid ML 25 ml | 001243
 Special Liquid ML 50 ml | 001244

Make up Neo Fluid

Mixing liquid for Make up Neo.

Make up Neo Fluid 25 ml | 001125

Make up Neo Reconditioner

For freshening up concentrated stains.

Make up Neo Reconditioner 8 ml | 001126

In Nova Neo Fluid

Mixing liquid for In Nova Neo.

In Nova Neo Fluid 25 ml | 001163

CreaPen Separating Pen

The double-ended ceramic insulation pen with one pointed and one broad nib for surfaces or grooves respectively can be simply used on the sealed die.

CreaPen Separating Pen | 000059

Liquid Firing Pad

The liquid firing pad for all Creation systems precisely fixes the object on the fireproof tray.

- Stable hold on the firing tray
- Easy to handle because of proven dispenser design
- Safe because of firing stability and optimum heat/warmth build-up onto the object
- Economical because of precise measuring
- Can be used for all Creation systems
- Tough and easy to remove

Liquid Firing Pad | 000081

Creation Brush Kit

The six different sizes of the first-class Kolinsky red sable brush with a heavy wooden holder perfectly meet all the requirements of layering techniques.

DENTURE TEETH

“Without any loss of aesthetics, the natural, slightly rectangular tooth shapes can perfectly be individualised and combined also due to the skilfully arranged interdental closing ridges.

My conclusion: Creopal teeth and shells are economic and aesthetic down to the smallest detail.”

Michael Zangl

CREOPAL COMPOSITE TEETH AND SHELLS – exclusive range of denture teeth: multifaceted play of colour and shape

High aesthetics, stability and efficiency: Creopal is a modern system of composite teeth with enhanced strength – the result of intercultural exchange. Thus the gnathology and the surface texture of the anterior teeth were designed in a Willi Geller project lasting several years, while the posterior teeth were developed in parallel by Yasuhiro Odanaka, among others.

The **ten anterior and five posterior tooth shapes** for the maxilla and mandibula are perfectly coordinated with each other. Particularly impressive features are their natural morphology and surface texture as well as an extraordinary gloss. As a result of the balanced filler content, the highly compacted composite teeth display high abrasion and flexural strength.

The exclusive range of artificial teeth also includes multifunctional **composite shells for the anterior and posterior area**. These Creopal Shells, despite their extremely thin layer thickness,

achieve the same colour effect and the same brightness value as full contour teeth – creating a masterful impact!

Individually adaptable and multiple indications: The Creopal system is available in 16 Vita® and two bleach shades, for perfect colour adaptation with acrylic and ceramic materials, the Creopal Shell system has a limited colour range. The artificial teeth produced by a four-layer process and the Creopal Shells with a two-layer method, are suitable for partial, combination and implant restorations as well as full dentures and as a set-up or mock-up for aesthetic try-ins and backward planning. The slightly rectangular tooth shapes can be perfectly individualised and combined – without any loss of aesthetics – best with Creation VC!

Creopal teeth and shells – for individual tooth aesthetics.

THE BRILLIANCE OF CREOPAL AND CREOPAL SHELL:

- System-independent, lifelike denture teeth and veneer shells made from composite
- Tooth shapes with enhanced opalescence and fluorescence – for more light dynamics
- Rectangular basic forms can easily be individualised without loss of colour
- Closed interdental spaces for a natural set-up and papilla shaping
- Universal indications in temporary restorations, partial and full dentures

CREOPAL: SHELL AND FULL CONTOUR

Veneer composite anterior tooth.

Single sets, shapes and shades

Creopal Shell upper jaw anterior teeth SAU 6-piece 1 set
4 shapes,
7 tooth shades A1–3.5, B1–3 and 1 bleach shade FW5

Creopal Shell lower jaw anterior teeth SAL, 6-piece 1 set
3 shapes,
7 tooth shades A1–3.5, B1–3 and 1 bleach shade FW5

Creopal Shell Posterior

Veneer composite posterior tooth.

Single sets, shapes and shades

Creopal Shell upper jaw posterior teeth SPU, 8-piece 1 set
4 shapes, 7 tooth shades A1–3.5, B1–3

Creopal Shell lower jaw posterior teeth SPL, 8-piece 1 set
4 shapes, 7 tooth shades A1–3.5, B1–3

Creation Tooth Cabinet

The tooth cabinet with five drawers offers enough space for up to 300 sets (60 anterior sets or 40 posterior sets per inlay). The drawer bases are made of anodised, black moulded sheet metal parts, and can be opened by lightly touching the front. Each drawer is fitted with a acrylic glass insertion plate at the front for individual labelling. Tooth cabinet without inlays and sets. 6-piece and 8-piece inlays are available individually.
Dimensions: 44.5 x 39.8 x 19.5 cm

Creopal Shade Guide

Tooth shade guide with 16 tooth shades A1–D4 and 2 bleach shades FW2 and FW5.

Creopal Shade Guide | 1100000001

Creopal Primer

Bonding agent for a secure bond between prosthetic tooth and prosthetic resin.

Creopal Primer | 1200000001

Type AU – upper anterior

Type AL – lower anterior

Contact Relationship in Statics

Flat intercuspation

Calotte: 140
Can readily be used in a combination technique and complete prosthetics due to the anatomical shape and the cusp inclination.

**CREAPEARL 2 PMMA TEETH –
cosmetic dentistry that works functional and looks natural**

Simply because being natural matters: the most fascinating characteristic of the Creapearl 2 anterior and posterior teeth is not only their brilliant aesthetics, but also their universal function. This means that the maximum demand for individuality can be reached. Minimal grinding on the body of the tooth also makes it easier to adjust the form of the tooth.

Thanks to the elaborate manufacturing process, high-value materials and a particularly strong dentine core, this range of anterior and posterior teeth, independent of any system, guarantees dental technicians **prosthetic teeth that are 100% true to their colour, shape and function** – adapted to the Vita® shade system.

Creapearl 2 Anterior

The lively colour effect of the Creapearl 2 Anterior makes it a classic anterior tooth with a wide variety of shapes. Its other distinguishing features are its **almost natural layering** with increased opalescence, fluorescence and translucence, and its lifelike surface structure.

Creapearl 2 Posterior

The posterior tooth has a **high level of abrasion resistance** and increased vertical stability and resilience – for a long life and resistance to plaque. Its **natural surface morphology** also makes it feel comfortable in the mouth.

The basic concept of the Creapearl 2 tooth range involves the reproduction of a natural tooth's function and character, using strengthened PMMA resin. The form follows the function, bringing the **fundamental principles of Creation** into effect:

- Raised opacity
- Chromatic dentine
- Opalescent glaze coating
- Individual high-contrast layering (coloured/white, opaque/translucent)

When the form and surface texture of the Creapearl 2 anterior teeth was conceived by master of ceramics Willi Geller, the MDT Dieter Schulz came up with the concept for the posterior teeth, using the occlusal compass and drawing on his great experience in NAT/NFR recovery technology. Thanks to this easy-to-understand positioning concept and the **multi-functional occlusal surface design** (with free spaces in the occlusion), all types of position and biting situations can be implemented.

Creapearl 2: natural and functional across all our designs!

**THE BRILLIANCE OF
CREAPEARL 2:**

- Anterior and posterior tooth range with perfect colouring and function
- Dynamic colour penetration for a reduction without colour wearing away
- Closed approximal areas for a vital red/white aesthetic ("Geller Wing")
- More expressive and natural structure of the occlusal surface relief
- Outstanding resistance to wear and tear
- Strong, characteristic tooth shape – can be used by anyone, for anyone, and adapted to suit the individual

Morphology	Constructional morphology (NAT)	Extended functional morphology (NFR)	Natural shape and cusp inclination

Constructional morphology (NAT), extended functional morphology (NFR), MDT Dieter Schulz

Typee A Anatomic – upper anterior teeth with natural root-shaped emergence profile
The denture tooth is a perfect anatomical copy of a natural tooth.

Typee V Vario – upper anterior teeth for individual contouring
The clinical tooth crown can be modified for an individual appearance, with or without grinding down the tooth neck, thanks to the model of the gingival edge.

Typee U – lower anterior teeth
Can be arranged in the same way as Typee V Vario, without affecting the anatomical circumstances. In this way, the length of the tooth itself can be determined.

Dynamicline
